Problem: C# ব্যবহার করে Switch Program লিখ।

```
Program:
using System;

public class HelloWorld
{
    public static void Main(string[] args)
    {
        Console.WriteLine ("Hello Mono World");
        Console.WriteLine ("Hello Mono World");
        Console.WriteLine ("Hello Mono World");
        Console.WriteLine ("Hello Mono World");
        Console.WriteLine ("Hello Mono World");
        int marks = 80;
        switch ((int) marks / 10){
            case 10:
            case  9:
            case  8:
            Console.WriteLine ("You have Got A+");
            break;
            case 7:
            Console.WriteLine ("You have Got A");
            break;
            case 6:
            Console.WriteLine ("You have Got A-");
            break;
            case 5:
            Console.WriteLine ("You have Got B");
            break;
            case 4:
            Console.WriteLine ("You have Got C");
            break;
            default:
            Console.WriteLine ("Fail");
            break;

        }
    }
}
```

Comment : Console.WriteLine() ব্যবহার করে Switch Program Print করা হল।
